1914

POPULATION : 1910

STATE OF BIRTH OF THE NATIVE POPULATION

Prepared under the supervision of WM. C. HUNT, Chief Statistician for Population

[Reprint of Chapter VI, pages 689-779 of Volume I of the Thirteenth Census Reports]

INTRODUCTION.

This chapter summarizes the data obtained in answer to the inquiry on the population schedule as to the state or territory of birth of persons born in the United States. This inquiry has been included at each census, beginning with that of 1850. It may be noted, however, that at the censuses of 1850 and 1860 the state of birth was returned for the free population only.

The returns are valuable mainly for the light they throw upon the migration of native population within the United States. The term "native population" as ordinarily used by the Bureau of the Census comprises all persons born in the United States, including those born in Alaska, Hawaii, Porto Rico, and other outlying possessions of the United States, persons born at sea under the United States flag, and persons of native parentage born abroad and designated as "American citizens born abroad." So defined, the native population living in the United States proper (that is, exclusive of outlying possessions), numbered, in 1910, 78,456,380 persons, of whom 78,095,419 were reported as born in some specified state of the United States, 7,365 as born in Alaska, Hawaii, Porto Rico, or other outlying possessions, 1,560 as born at sea under the United States flag, and 66,351 as American citizens born abroad. There remain 285,685 persons for whom the place of birth was either not reported at all or was reported as the United States without specifying the state. These have all been classified as born in the United States, state of birth not reported. A few of them were doubtless in fact born in foreign countries, but it is believed that the large majority of the persons for whom no information as to place of birth was given were born in the United States.

The several classes of native population above enumerated are shown by divisions in Table 1.

Many of the tables in this chapter are confined to the native population reported as born in some one of the states; and when it is believed that the connection makes the meaning clear, the terms "native" and "native American" are frequently used in the text in a restricted sense to include this class only. The table headings are more precise.

Table 1

DIVISION OF RESIDENCE.	Total population: 1910	NATIVE POPULATION.				
		Total.	Born in the United States and with state of birth re- ported.	Born in out- lying posses- sions or at sea.	Ameri- can citizens born abroad.	State of birth not re- ported. ¹

¹ Including those for whom there was no information as to place of birth, some of whom may have been foreign born.

General extent of migration of native population within the United States.—Of the 78,095,419 persons reported in 1910 as born in some specified state, 61,185,305 were born in the same state in which they were residing at the time the census was taken, as shown by Table 2. The remainder, 16,910,114, had migrated from the state in which they were born and were living in some other state. The persons who had thus migrated formed 21.7 per cent of the total. This percentage differs but little from those shown by the four previous censuses, which have ranged from 23.2 per cent in 1870 to 20.6 per cent in 1900.

Table 2

1900.....	65,402,767	51,901,723	13,501,045	20.6
1890.....	52,965,719	41,871,611	11,094,108	20.9
1880.....	43,475,498	33,882,734	9,592,764	22.1
1870.....	32,976,660	25,321,340	7,655,320	23.2

¹ Exclusive of population of Indian Territory and Indian reservations, specially enumerated in 1860, with a native population of 325,451, which, however, was not distributed by state of birth. These areas were not enumerated in 1880 or 1870.

The fact that each census from 1870 to 1910 showed that about one-fifth of the native Americans had migrated from the state of birth and were living in other states indicates a rather high degree of mobility on the part of the population, especially when it is remembered that the census distinguishes as migrants

only those persons who have migrated across state lines and are at the date of the census living in a state other than that in which they were born. The census statistics, therefore, afford no indication of migration from one locality to another within the same state.

There is no doubt that some intrastate migration involves a greater change of environment, and even a longer journey, than some of the migration across state lines. Much of the movement from country to city takes place within the confines of a single state; on the other hand, some of the interstate migration is merely from one border county or city to another just across the state line. Computations made in connection with the census of 1900 indicated that almost one-half of the persons living outside of the state of birth lived in states adjoining the state of birth.

It may be noted, furthermore, that the census figures do not reveal the migrations from state to state outside the state of birth. A person who had at one or at several times moved from one state to another, and afterward had returned to the state of birth, would not be distinguished as a migrant in the census returns. If he had not returned to the state of birth, he would be classified as an interstate migrant, but no account would be taken of the number of his interstate migrations. It may be noted further that the proportion of migrants in the adult population undoubtedly exceeded at each census the percentage given in Table 2, since the percentages of Table 2 are based upon the total population born in and living in the United States, including children, among whom it may be assumed the proportion of migrants is relatively small.

It is obvious that the statistics in Table 2 showing the number of persons living outside of the state of birth at a given census do not represent the total number of persons who have migrated from the state of birth to other states during any given period of time. Some of those who have migrated have died; others may have returned to the state of birth, or may have migrated to outlying possessions, or to foreign countries, the statistics showing only those living at the time of enumeration in the United States, outside the state in which born. These may be briefly described as surviving migrants. However, a relative increase or decrease from census to census in the number of surviving migrants is generally indicative of an increase or decrease in the mobility of the native population.

INTERDIVISIONAL MIGRATION.

Aggregate migration of total native population from and to each division.—Table 3 shows the difference between the total number of native Americans living in each of the nine geographic divisions as reported at the census of 1910 and the total number born in each division living in the United States.

Table 3

DIVISION.	POPULATION BORN IN AND LIVING IN THE UNITED STATES AND WITH STATE OF BIRTH REPORTED: 1910		
	Born in the specified division.	Living in the specified division.	Net gain (+) or loss (—) by interdivisional migration (col. 2—col. 1).
	1	2	3
United States	78,095,419	78,095,419
New England.....	4,907,215	4,702,088	—205,127
Middle Atlantic.....	15,342,852	14,410,385	—932,467
East North Central.....	16,479,755	15,103,330	—1,376,425
West North Central.....	9,449,180	9,961,467	+512,287
South Atlantic.....	12,770,824	11,869,658	—901,166
East South Central.....	9,481,023	8,304,102	—1,176,921
West South Central.....	6,758,408	8,392,981	+1,634,573
Mountain.....	1,289,296	2,158,616	+869,320
Pacific.....	1,616,866	3,192,792	+1,575,926

The table shows—to take an illustration—that there were, in 1910, 4,907,215 persons living in the United States (exclusive of outlying possessions) who were reported as born in New England, while the number of native Americans residing in New England was 4,702,088, or 205,127 less. This difference represents the net loss to New England in the balancing of surviving migrants. To put the matter in another way, if all persons should return to the division in which they were born, the number of persons coming back to New England would exceed by 205,127 the number of persons leaving New England for other parts of the United States. It is evident that the number of persons reported as born in any division by no means indicates what the native American population of that division would have been had there been no interstate migration on the part of the present generation. If every person now living who was born in New England had remained there, the living children and grandchildren of such persons would have been added to the population of that division; as it is, the children and grandchildren of those who migrated elsewhere appear as natives of other divisions. The converse is true regarding the descendants of persons born in other divisions and now living in New England. Thus while the census makes it possible to measure what may be termed the direct effects of the migration of persons still living, it affords no means of measuring the indirect effects.

All divisions east of the Mississippi have lost more than they have gained as the direct result of the migration of persons still living. The more westerly divisions—the West North Central, West South Central, Mountain, and Pacific—have gained largely by such migration. If all the native Americans in the country should return to the states where they were born, the Pacific division would lose nearly one-half of its native American population.

The preceding table shows only the net effects of migration. More specifically the net gain or loss in each case represents the difference between the number of native Americans born in the division who were

living outside of it and the number living in the division who were born outside. These numbers, together with the number still living in 1910 in the division in which born, are shown for each division in Table 4.

Table 4

Table 4 <
--

Of the 78,095,419 native Americans enumerated in 1910 with state of birth reported, 11,349,040, or 14.5 per cent, were living outside the division in which born. This percentage is lower than the percentage living outside the state in which born (21.7), as shown by Table 2, for the obvious reason that many persons migrate from one state to another within the same geographic division. They are interstate but not interdivisional migrants. Table 4 shows that in 1910 of the 4,907,215 persons born in New England, 4,338,452 were still living there, while 568,763 were living in other divisions; on the other hand, there were 363,636 persons living in New England who had been born in other divisions. The difference between the two figures last named, 205,127, is the direct net loss to New England by interdivisional migration, as already shown in Table 3. Of the population born in New England, 11.6 per cent had emigrated to other divisions, and of the native American population living in New England, 7.7 per cent had immigrated from other divisions. These statements indicate how the table is to be read.

This table also shows that in 1910 the percentage of the native American population born outside the division was much larger in the West North Central, West South Central, Mountain, and Pacific divisions than it was in the case of the five more easterly geographic divisions. In the Mountain and Pacific divisions about one-half of the native American population consisted of those born outside; in the South Atlantic division the proportion was only 4.9 per cent.

It is noteworthy that, notwithstanding the large number of persons living in the West North Central division who were born outside it, the percentage of its own natives living outside its borders (19.5 per cent) was larger than the corresponding percentage for any other geographic division. The statistics indicate that the earlier extensive migration into this division has been followed by a very considerable migration out of it toward the West and South and even east-

ward into the East North Central division (see Table 29). The lowest proportion living outside the division of birth in 1910, 6.1 per cent, was that for persons born in the West South Central division.

As the population to which the data of Table 4 relate is the population native of, and at the date of the given census resident in, the United States, the total for the country as a whole, given under the heading "Born in the specified division" (78,095,419 in 1910), the same as the total under the heading "Living in the specified division," and similarly, the total "Living in other divisions" (11,349,040 in 1910), the same as the total "Born in other divisions." There are of course no corresponding equalities in these totals by divisions, but obviously the country as a whole can neither gain nor lose population by interdivisional or interstate migration, and the sum of the gains of the divisions (or, as shown in subsequent tables, of the states) which have gained by migration from state to state must exactly equal the sum of the losses of the divisions (or states) which have lost.

Table 5 is a continuation of Table 4. It shows the migration to and from each geographic division as reported at each census from 1870 to 1910; that is, it shows what proportion of the total population reported at each census as born in the division was living in other divisions, and, conversely, what proportion of the native American population living in each geographic division was born in other divisions.

In 1870, 17.3 per cent of the persons born in New England were living in other divisions. In 1910 the percentage had declined to 11.6. There was a similar decline in the percentage for the Middle Atlantic and South Atlantic divisions. The two North Central divisions show an increase in this percentage. The two South Central divisions show, on the whole, no marked change in this respect, but the percentage of emigrants from the Mountain division has greatly increased, while that of emigrants from the Pacific division has increased in some degree.

POPULATION BORN IN AND LIVING IN THE UNITED STATES, BY DIVISIONS: 1870-1910.

In the case of the New England and Middle Atlantic divisions there has been some increase in the relative importance of domestic immigration, as measured by the percentage of the native American population born outside of the division. Thus, in 1870, 4 per cent of the total population born in the United States and living in New England were born outside New England. By 1910 the proportion had increased to 7.7 per cent. The South Atlantic division also shows some increase in this percentage, but the four central divisions show a marked decline. Thus, in 1870, almost one-half (48.9 per cent) of the total native population inhabiting the West North Central division were born in other parts of the United States, as against less than one-fourth (23.6 per cent) in 1910. In the Mountain and Pacific divisions the percentage has fluctuated without any continuous movement toward either a higher or a lower percentage. It is noteworthy, however, that, notwithstanding the large

migration to the Pacific coast in the years following the discovery of gold in California, the proportion of the native population of the Pacific division reported as born outside that division was larger in 1910 than at any preceding census back to and including 1870.

Comparing the returns for 1910 with those for 1900, as shown in Table 5, the divisions may be placed in two groups—first, those in which the direct loss through interdivisional migration of persons now living was reduced or the gain increased during the decade, and, second, those of which the converse is true, the loss being increased or the gain reduced. The two groups are distinguished by the last two columns of Table 6.

The first group includes the New England, Middle Atlantic, and South Atlantic divisions, in which the loss through interstate migration has been reduced, and also the West South Central, Mountain, and Pacific divisions, in which the gain has been increased. The second group includes the East North Central and

East South Central divisions, in which the loss has been increased, and also the West North Central, in which the gain has been reduced. In 1900 the West North Central division, for example, had, as is shown in Table 6, gained 1,328,616 persons, but in 1910 the gain was only 512,287, a reduction of 816,329.

DIVISION.	NET GAIN (+) OR LOSS (-) THROUGH INTERDIVISIONAL MIGRATION.		Reduction of loss or increase of gain: 1900-1910	Increase of loss or reduction of gain: 1900-1910
	1910	1900		
New England.....	-205,127	-218,765	13,638
Middle Atlantic.....	-932,467	-1,088,150	155,683
East North Central.....	-1,376,425	-855,449	520,976
West North Central.....	+512,287	+1,328,616	816,329
South Atlantic.....	-901,166	-950,558	49,392
East South Central.....	-1,176,921	-880,632	296,289
West South Central.....	+1,634,573	+1,389,434	245,139
Mountain.....	+869,320	+525,611	343,709
Pacific.....	+1,575,926	+749,893	826,033

The manner in which the changes appearing in the last two columns of Table 6 have come about is shown in Table 7, in which is given for each division the increase between 1900 and 1910 in the number born in the division and living in other divisions, and also the increase (in one case a decrease) during the decade in the number living in each division and born in other divisions. The differences between these two figures—which differences are the same as those appearing in the last two columns of Table 6—are shown in the last column of Table 7.

DIVISION.	1900-1910		
	Increase in number born in specified division, liv- ing in other divisions.	Increase ¹ in number liv- ing in spec- ified division, born in other divisions.	Net gain (+) or loss (-) during the decade.
New England.....	41,784	55,422	+13,638
Middle Atlantic.....	73,346	229,029	+155,683
East North Central.....	604,021	83,045	-520,976
West North Central.....	738,329	-78,000	-816,329
South Atlantic.....	105,924	155,316	+49,392
East South Central.....	306,473	10,184	-296,289
West South Central.....	179,868	425,007	+245,139
Mountain.....	103,824	447,533	+343,709
Pacific.....	41,200	867,233	+826,033

¹ A minus sign (-) denotes decrease.

Table 7 shows, for example, that the reduction between 1900 and 1910 in the gain of the West North Central division through interstate migration was occasioned by (1) an increase of 738,329 during the decade in the number of natives of the division living in other divisions, and (2) a decrease of 78,000 in the number of natives of other divisions living in the West North Central division. Each of these changes tends to reduce the net gain of the division through interstate migration, and the sum of the two gives the total reduction (816,329). In all other divisions both the figures in the first column and those in the second column are increases, but in some divisions the figures in the first column are the greater and in others those in the second column.

The figures presented in the first two columns of Table 7, however, are obviously not a statement of

migration into and out of the several divisions during the decade; nor are the net changes shown in the last column due entirely to migration. The changes in the number of migrants and the net gains and losses are figured on a comparison of the total number of migrants in the population in 1900 and in 1910. Changes in the net gains and losses from census to census are in each case the sum of several variables which can not be exactly determined. During the decade the net gain of the West North Central division, for example, must have been increased (1) by continued immigration of natives from other divisions, (2) by mortality among natives of the West North Central division living at the beginning of the decade in other divisions, (3) by the return of its emigrants to the West North Central division or their emigration to outlying possessions or to foreign countries; on the other hand, the net gain must have been reduced (4) by continued emigration of natives of the West North Central division to other divisions, (5) by mortality among natives of other divisions living at the beginning of the decade in the West North Central division, and (6) by emigration of its native immigrants to other divisions or to foreign countries. Undoubtedly, however, in the case of marked changes in gain or loss for any division between 1900 and 1910, or in any other of the decades covered by Table 5, migration during the decade has been the chief factor.

In the New England and South Atlantic divisions the net loss through interdivisional migration declined in each decade covered by Table 5. In the case of the East North Central division the gain shown at the censuses of 1870 and 1880 has given place to a loss which was much greater in 1910 than in 1900 or 1890. In the case of the West North Central division the gain through interdivisional migration reached its maximum in 1890 and has declined very greatly since then. In the West South Central, Mountain, and Pacific divisions, on the other hand, the gain has steadily increased, being greater in 1910 than at any preceding census.

Aggregate migration of native white and native negro population from and to each division.—The preceding tables have dealt with the total native population without distinction of race. It is desirable, however, to consider separately the native white and the native negro population, which together constitute nearly the entire number of native Americans. Table 8, therefore, presents for these two classes statistics similar to those presented in Table 4 for the total native population.

This table indicates a somewhat greater mobility on the part of the white population than on the part of the negro. Of the 68,070,294 native whites considered, 10,366,735, or 15.2 per cent, were living in some other division than that in which born. Of the 9,746,043 native negroes considered, 963,153, or 9.9 per cent, were living outside the division of birth. In the case of the whites the percentages living outside the division of birth ranged from 6.9 for whites

born in the Pacific division to 21.6 for those born in the East South Central. In the case of the negroes the percentages ranged from 3.6 for those born in the West South Central division to 43.9 for those born in the Mountain division. Outside the South a large part of the negro population are not natives of the division in which living, but have immigrated from other divisions, principally from the South, the proportion of

immigrants ranging from almost one-third in the West North Central division to about four-fifths in the Pacific and Mountain divisions. The South Atlantic and East South Central divisions were the only ones in 1910 which had suffered a direct loss in population through the migration of negroes of the present generation. The absolute gain was most conspicuous in the case of the Middle Atlantic and West South Central divisions.

Migration to the several divisions from other divisions and from foreign countries.—Table 9 shows for 1910 the sources from which the different geographic divisions had drawn their population. The three classes distinguished are (1) natives of the division of residence, (2) native Americans born outside the division of residence, and (3) the foreign born; more briefly, they may be called natives, domestic immigrants, and foreign immigrants. It may be noted that these three classes do not quite make up the total population. The residual class comprises persons born in the United States with state of birth not reported, persons born in outlying possessions of the United States, or at sea under the United States flag, and American citizens born abroad.

¹ Includes persons born in the United States, state of birth not reported; persons born in outlying possessions, or at sea under United States flag; and American citizens born abroad. (See Tables 1 and 35.)

In most of the divisions the natives are greatly in the majority, outnumbering both classes of immigrants. The preponderance is greatest in the South Atlantic division, where 92.6 per cent of the population in 1910 consisted of persons born in the division. The proportion was nearly as great in the East South Central. In the Pacific division, however, the most important class numerically was that of the domestic immigrants, who formed 40.3 per cent of the total population in 1910, while the natives of the division formed but 35.8 per cent, and the foreign immigrants 22.8 per cent. In the Mountain division the natives of the division were only slightly more numerous than the domestic immigrants, and constituted but 41.8 per cent of the total population. Of course, these conditions are indicative of the comparatively recent settlement and rapid development of the far West, and of the great migration thither from other parts of the United States. In New England and in the Middle Atlantic and East North Central divisions the greater part of the immigration is from foreign countries, the foreign-born greatly outnumbering the domestic immigrants, but in all the other divisions the foreign immigrants are the least numerous of the three classes here compared.

The aggregate immigrant population, domestic and foreign, constituted in the several divisions a proportion of the total population varying in 1910 from 7.2 per cent in the South Atlantic to 63.1 per cent, or nearly two-thirds, in the Pacific division.

In Table 10 is given the total number of natives, domestic immigrants, and foreign immigrants resident in each division in 1910, 1900, and in 1890, and in Table 11 corresponding figures are given for the resident white population of each division. Table 12 gives the percentage distribution based upon the classifications of Tables 10 and 11. These tables thus give for the total population and for the white population separately, at each of the last three censuses, data similar to that shown in the preceding table (Table 9) for the total population in 1910.

In the country as a whole the percentage of the total population born in the division of residence has varied but little from census to census since 1890, the percentage for 1910 being slightly below that for 1900 and above that for 1890.

At each census, 1890 to 1910, the percentage of domestic immigrants was relatively low for each division east of the Mississippi River, as compared with the corresponding percentage for the divisions west of the river. At each census the percentage foreign born was relatively high in the northern and in the western divisions and low in the southern divisions.

Although the percentage of domestic immigrants was lower in 1910 than in 1900 in four divisions, and in one division was the same in both years, the absolute number of domestic immigrants had decreased in only one division, the West North Central. Between 1890 and 1900 the percentage of domestic immigrants declined in six divisions, the West North Central division being in this decade also the only one in which the absolute number of domestic immigrants decreased.

Comparison of the figures for the three censuses, as shown in Table 10, reveals the relative importance of the three classes as factors in the increase in the population of the several divisions during the two decades. The comparison is facilitated by Table 13. It may be well to point out that this table throws no light upon the question of the fecundity or natural increase of the population. The persons reported in 1910 as born in a given division include, of course, many children of persons who were not born in the division as well as the children of persons who were.

This table shows very great differences among the geographic divisions with respect to the relative importance of the three classes as factors in the increase in population. In the New England and Middle Atlantic divisions the increase during the decade 1900-1910 was chiefly in persons born within the division of residence and in the foreign born, the increase in the latter being, roughly, three-fourths as great as in the former. In the East North Central division conditions were somewhat similar, except that the increase in the foreign born was relatively less important. In the West North Central, South Atlantic, and East South Central divisions, on the other hand, nearly the entire increase was in natives of the division. In the West South Central division there was a marked increase in

domestic immigrants, as well as in natives of the division, but comparatively little increase in the foreign born. Finally, in the Mountain and Pacific divisions the increase in domestic immigrants was greater than that in natives, and there was also a very considerable increase in the foreign born.

Pacific.....	528,358	340,585	173,706	30,721

¹ A minus sign (—) denotes decrease.

² Includes persons born in the United States, state of birth not reported; persons born in outlying possessions, or at sea under United States flag; and American citizens born abroad.

³ The increases in columns 2 and 3 are somewhat exaggerated on account of the omission in 1890 of population of Indian Territory and Indian reservations. (See Note 1 to Table 10.)

In the decade 1890-1900, as compared with 1900-1910, a smaller proportion of the increase in the country as a whole and in the divisions severally was attributable to increase in the number of the foreign born. In the country as a whole and in the East North Central, West North Central, and East South Central divisions the absolute increase in the number born in the division of residence in the decade 1890-1900 exceeded the corresponding increase in the following decade; and in the New England, Middle Atlantic, East North Central, East South Central, and West South Central divisions the absolute increase in the number born in a division other than that of residence, in the decade 1890-1900, exceeded the corresponding increase in the following decade. In no division was the increase in the number of the foreign born so great in the decade 1890-1900 as in the decade 1900-1910.

Distribution of population by division of birth and division of residence.—More specific information regarding interdivisional migration may be obtained from Table 35, pages 730 to 734, the first part of which distributes, when read from left to right, the number of native American persons living in each geographic division by division of birth. If read downward, the table distributes the number born in each division by division of residence. In Table 14 persons born in each geographic division are distributed on a percentage basis according to the division in which they were resident in 1910.

Table 14

DIVISION OF RESIDENCE.	PER CENT DISTRIBUTION, BY DIVISION OF RESIDENCE, OF THE POPULATION IN 1910.

South Atlantic.....	0.6	1.3	0.7	0.3	88.4	1.9	0.3	0.3	0.3
East South Central.....	0.1	0.2	0.8	0.3	2.6	81.1	1.2	0.2	0.1
West South Central.....	0.2	0.4	1.9	5.3	2.2	9.1	93.9	1.3	0.5
Mountain.....	0.6	0.7	1.8	4.1	0.4	0.6	1.3	85.4	3.0
Pacific.....	2.0	1.5	3.3	5.3	0.5	0.8	1.0	7.2	92.9

Table 14 shows, for example, that in 1910, of the total number of persons born in New England, 88.4 per cent were still living in that division, while 4.5 per cent were living in the adjacent division on the west—the Middle Atlantic division; 2 per cent in the next division farther west—the East North Central; 1.5 per cent in the West North Central; and 2 per cent in the Pacific. The percentage living in the division in which born ranged from 80.5 in the West North Central division to 93.9 in the West South Central division.

In a majority of cases the largest number of the emigrants from any division are resident in the adjoining division on the west. This is true of the emigrants from the New England, the Middle Atlantic, the East North Central, the East South Central, and the Mountain divisions; but the South Atlantic division has a larger number of its emigrant natives in the division immediately north of it than in any other division, and this is also true of the West South Central division, while of the emigrants from the West North Central a larger number went to the Pacific division and also to the West South Central than to

the adjacent Mountain division on the west. While the main current of migration is westward, there has been some eastward migration and considerable migration north and south.

Table 15 shows what percentage of the native population resident in each division were born in that division and in each of the other divisions. The percentages are based on the total native population, including persons born in the outlying possessions of the United States, or at sea under the United States flag, persons born in the United States for whom the state of birth was not reported, and American citizens born abroad. The table is substantially the converse of Table 14 and needs little comment. It brings out the fact that the two North Central divisions have contributed largely to the population of the Pacific and Mountain divisions. Of the total native population of the Pacific division, 31.7 per cent were born east of the Mississippi (that is, in the New England, Middle Atlantic, East North Central, South Atlantic, and East South Central divisions), and of the total native population of the Mountain division, 24.6 per cent.

¹ Less than one-tenth of 1 per cent.

² Includes also persons born at sea under United States flag and American citizens born abroad.

Certain broad generalizations of considerable interest become obvious when the data are tabulated for the three geographic sections—the North, the South, and the West. Table 16 gives for all races and for the whites and negroes separately, the distribution of the population resident in each section in 1910 by section

of birth; or, conversely, of the population born in each section by section of residence. The North comprises the New England, Middle Atlantic, and the two North Central divisions; the South, the South Atlantic and the two South Central divisions; and the West, the Mountain and Pacific divisions.

RACE AND SECTION OF RESIDENCE.	Total native population: 1910	BORN IN—			State of birth not reported, or born in outlying posses- sions, etc.
		The North..	The South..	The West..	
ALL RACES.

The West.....	5,245,970	2,190,327	378,379	2,615,030	62,234
NEGRO.					
United States.....	9,787,424	621,286	9,109,153	15,604	41,381
The North.....	999,451	570,298	415,533	2,295	11,325
The South.....	8,738,858	39,077	8,668,619	2,412	28,750
The West.....	49,115	11,911	25,001	10,897	1,306

Table 16 brings out the fact that there has been considerable migration from North to South and from South to North, as well as from East to West. The absolute number of persons born in the North and living in the South (1,449,229) was not very different from the number born in the South and living in the North (1,527,107). The North, however, has contributed more than five times as many to the population of the West as the South has.

The migration of the negro population has, of course, been mainly from the South to the North and the West, as the number of negroes outside the South is too small to furnish many migrants. The number of negroes born in the South and living in the North in 1910 was 415,533, or a little over two-fifths of the total number living in the North. Of the 9,109,153 negroes born in the South, 440,534, or 4.8 per cent, were in 1910 living outside the South.

Trans-Mississippi migration.—The westward migration of the native population, which has continued for several decades, may be seen even more clearly by com-

paring the statistics for the territory east of the Mississippi with those for the territory west of that river. The westward drift has been to a greater or less extent offset by a counter migration eastward. Statistics relating to the migration westward and eastward across the Mississippi River, and the net gain of natives to the states west of the Mississippi as a result of the excess of the trans-Mississippi migration westward over that eastward—so far as that migration can be determined from the returns of the census—are given in Table 17 for each census year from 1870 to 1910, inclusive. The number of natives born east of the Mississippi and living west of the river increased from 2,434,721 in 1870 to 5,276,879 in 1910; the number born west of the Mississippi and living east of the river increased in the same period from 135,769 to 684,773. At the census of 1870 the net gain of the west was 2,298,952, the corresponding figure for 1910 being 4,592,106. In the decade 1890–1900 in consequence of the relatively more rapid increase of the eastward, as compared with that of the westward migration, the net gain of the west decreased slightly—from 4,078,157 to 3,993,554. At the census of 1890, 8.8 per cent, or more than one-twelfth, of the native population had migrated from the state of birth eastward or westward across the Mississippi River, the corresponding percentage for 1910 being 7.6. In 1890, of the population born east of the Mississippi, 10.1 per cent had migrated westward across the river, and of the population born west of the Mississippi, 2.9 per cent had migrated eastward across the river. The corresponding percentages in 1910 were 8.9 and 3.6. The migration eastward is shown to have increased relatively faster than the migration westward; in 1870 those who had migrated westward across the Mississippi outnumbered those who had migrated eastward across that river by about 18 to 1, but in 1910 by about 8 to 1.

Table 17

POPULATION BORN IN AND LIVING IN THE UNITED STATES, WITH STATE OF BIRTH REPORTED.

CENSUS YEAR.	Total.	Trans-Mississippi migrants.						Population born east, percentage living west of the Mississippi.	Population born west, percentage living east of the Mississippi.	
		Number.	Per cent of total.	Born east and living west of the Mississippi.	Born west and living east of the Mississippi.	Net gain of the west and loss of the east.	Percentage of trans-Mississippi migrants.			
							Moved west across the river.			Moved east across the river.
1910.....	78,095,419	5,961,652	7.6	5,276,879	684,773	4,592,106	88.5	11.5	8.9	3.6
1900.....	65,402,767	5,030,640	7.7	4,512,097	518,543	3,993,554	89.7	10.3	8.8	3.6
1890.....	52,965,719	4,642,875	8.8	4,360,516	282,359	4,078,157	93.9	6.1	10.1	2.9
1880.....	43,475,498	3,721,096	8.6	3,510,737	210,359	3,300,378	94.3	5.7	9.4	3.3
1870.....	32,978,660	2,570,490	7.8	2,434,721	135,769	2,298,952	94.7	5.3	8.2	3.9

Migration North and South.—In Table 18 a tabulation is made with reference to migration of natives to the North from the South and to the South from the North, covering the five censuses, 1870–1910. The

totals of the first two columns, giving the number living in the United States, who were born in the North and in the South, respectively, include persons born in the North and in the South who were living in the West.

The number of these migrants into the West from the North and the South, which is given for 1910 in Table 16, is not given separately in Table 18. Table 18 is confined to the North and South migration of natives. The last column gives the net gain of the North and loss of the South at each census. At each census subsequent to 1870 the number born in the North living in the South and also the number born in the South living in the North had increased, but the migration southward in each decade increased relatively much more rapidly. In 1870 the number born in the South living in the North was more than three and one-half times as great as the number born in the North living in the South; in 1910, as already noted, the numbers were almost equal. In 1910 as compared with 1870 a smaller proportion of the population born in the South were living in the North, and a larger proportion of the population born in the North were living in the South.

Table 18					
CENSUS YEAR.	Total population born in the North.	Total population born in the South.	Born in the North living in the South.	Born in the South living in the North.	Net gain of North and loss of South.
1910.....	46,179,002	29,010,255	1,449,229	1,527,107	77,878
1900.....	39,125,506	24,342,126	1,021,450	1,295,853	274,403
1890.....	31,933,974	19,837,710	635,594	1,135,620	500,026
1880.....	25,943,315	16,787,372	473,790	1,112,808	639,018
1870.....	19,899,822	12,689,925	298,298	1,050,853	752,555

In the following summary for 1910 the migrants shown in Table 18 are distributed by division of residence.

DIVISION OF RESIDENCE.	Number.
Migrants to the North from the South: 1910	
Total.....	1,527,107
New England.....	50,333
Middle Atlantic.....	437,999
East North Central.....	574,583
West North Central.....	464,187
Migrants to the South from the North: 1910	
Total.....	1,449,229
South Atlantic.....	368,445
East South Central.....	196,665
West South Central.....	884,119

The migration southward, it will be noted, has been in recent years, largely into the West South Central division, while the migration northward has been more evenly distributed by divisions, except that a comparatively small number of migrants from the South have gone into the New England states.

In Table 19 the migrants shown in Tables 17 and 18 for 1910 are classified by color and by parentage. This analysis of the data brings out clearly the fact that the net gain of the North from the South in 1910 was attributable entirely to the relatively large net migration northward of the negro population. For the whites of native and of foreign or mixed parentage there had been a net migration southward.

Table 19

Section.	POPULATION: 1910					
	Total.	White.			Negro.	All other.
		Total.	Of native parentage.	Of foreign or mixed parentage.		
Born east and living west of the Mississippi River	5,276,879	4,941,529	3,846,940	1,094,589	331,031	4,319
Born west and living east of the Mississippi River	684,773	616,939	417,541	199,398	63,671	4,163
Net migration westward across the Mississippi River	4,592,106	4,324,590	3,429,399	895,191	267,360	156

Net migration northward	77,878				376,456	

INTERSTATE MIGRATION.

Aggregate migration of total native population from and to each state.—Table 20 presents for the several states in 1910, 1900, 1890, and 1880 data showing what proportion of the population born in each state were living in other states and what proportion of the native American population of each state were born in other states. It shows, for example, that the population of the United States (not including Alaska, Hawaii, Porto Rico, or other outlying possessions) in 1910 included 791,827 persons who were born in the state of Maine and that of this number, 578,739 were living in Maine, while 213,088, or 26.9 per cent of the total, had left Maine and settled in other states; and it shows

also that the population of Maine included 628,748 native Americans with state of birth reported, of whom 578,739 were born in Maine and 50,009, or 8 per cent, were born in other states. The numbers of native Americans who had thus migrated from and to the several states are shown graphically in the diagram on page 702. In the first of the two maps on page 703 the shading of the state areas indicates approximately the percentage of emigrants in the population native of each state and living elsewhere in the United States; in the second map, the percentage of domestic immigrants—that is, of those born in other states—in the resident native population of each state.

POPULATION BORN IN EACH STATE, WITH NUMBER AND PERCENTAGE LIVING IN OTHER STATES, AND
NUMBER LIVING IN EACH STATE, WITH NUMBER AND PERCENTAGE BORN IN OTHER STATES: 1880-1910.

¹ Exclusive of population living in Indian Territory and on Indian reservations, not distributed by state of birth in 1890 and not enumerated in 1880.

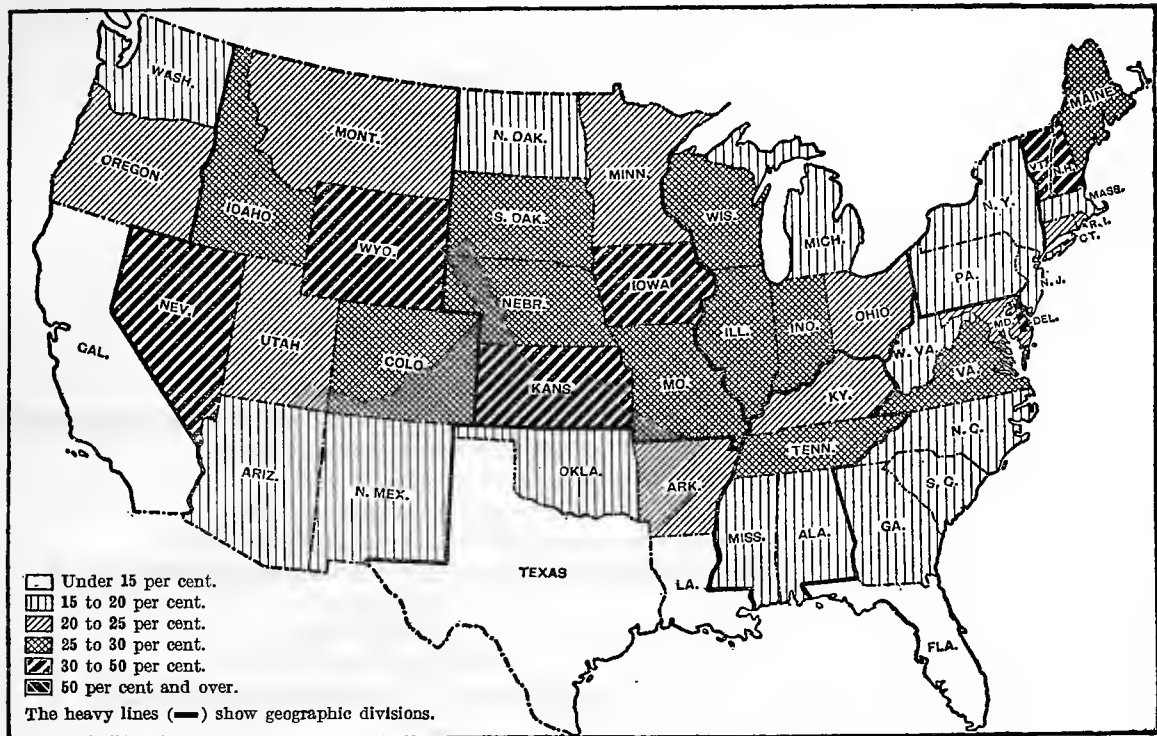

² Population of Indian Territory and Indian reservations not distributed by state of birth in 1890 and not enumerated in 1880.

POPULATION.

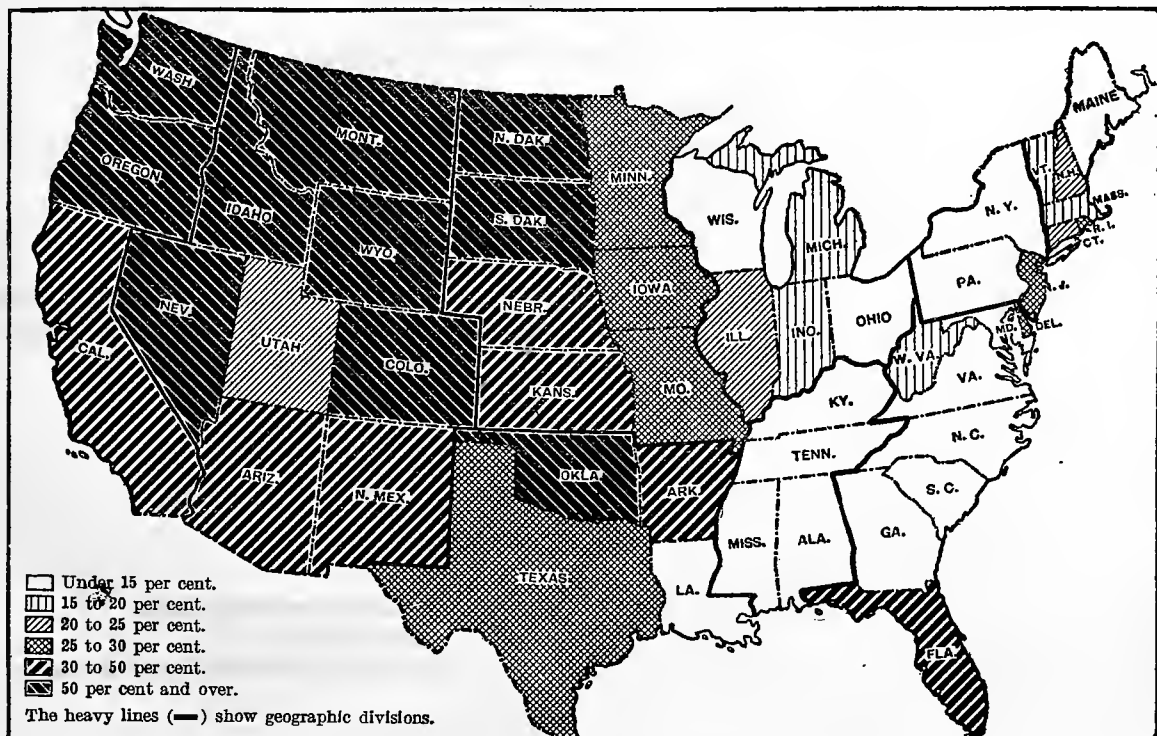

MIGRATION OF NATIVE POPULATION FROM AND TO EACH STATE: 1910.

PERCENTAGE LIVING IN OTHER STATES OF THE POPULATION BORN IN EACH STATE: 1910.

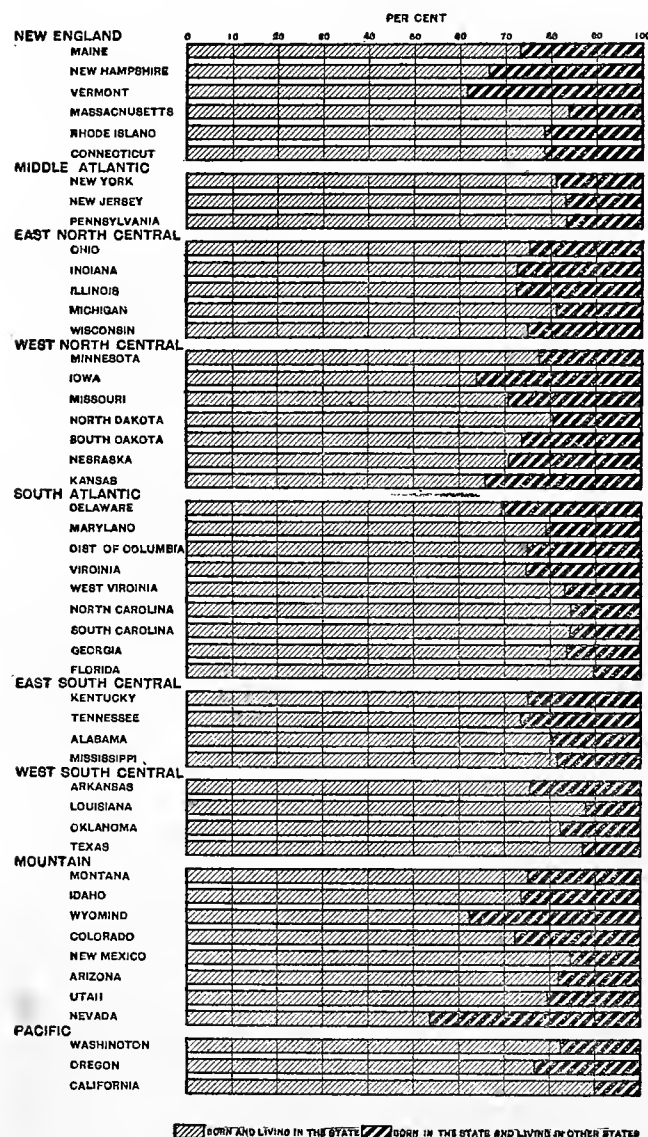

PERCENTAGE BORN IN OTHER STATES OF THE NATIVE POPULATION LIVING IN EACH STATE: 1910.

As shown by Table 20 the proportion of the natives of the several states residing in other states in 1910 varied widely. In the case of the following states it exceeded one-third: Nevada (46.4 per cent); Vermont (38.6); Wyoming (37.8); Iowa (36.1); Kansas (34.2); and New Hampshire (33.8). In the following states it was less than one-sixth: Pennsylvania (16.6 per cent); Georgia (16.4); Massachusetts (16.1); New Mexico (15.5); South Carolina (15.5); North Carolina (15.4); Texas (12.9); Louisiana (12.1); Florida (10.2); and California (10). The following diagram shows what percentage of the natives of each state were still living in that state in 1910 and what percentage had emigrated to other states; it does not include persons who migrated from the states named to outlying possessions of the United States.

DISTRIBUTION OF NATIVES OF EACH STATE AS LIVING IN STATE OR LIVING IN OTHER STATES: 1910.

ing that term to persons born outside the state but within the United States—formed less than one-tenth of the native American population of the state in 1910. East of the Mississippi there are only 4 states (Rhode Island, New Jersey, Delaware, and Florida) in which the proportion exceeded one-fourth. In the District of Columbia, however, the proportion exceeded one-half. West of the Mississippi there are 10 states (North Dakota, South Dakota, Oklahoma, Montana, Idaho, Wyoming, Colorado, Nevada, Washington, and Oregon) in which more than half the native American population in 1910 were domestic immigrants and only 2 (Louisiana and Utah) in which the proportion was less than one-fourth.

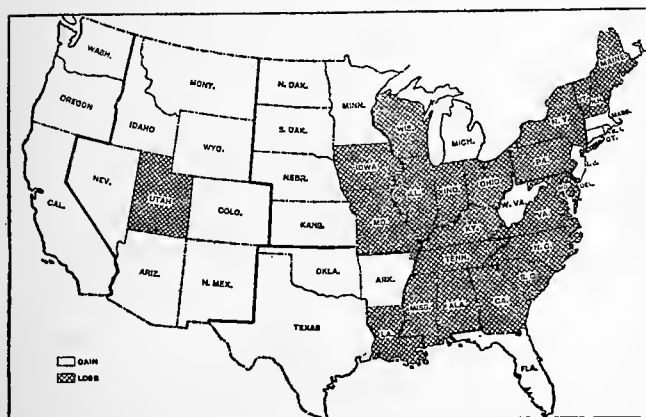

While the percentage of domestic immigrants in the resident native population is generally high for the states of the Mountain and the Pacific divisions, and for other states west of the Mississippi relatively to the percentage for Eastern states, there was, nevertheless, a wide range of variation even among states of the same division. The range was in the New England division from 8 per cent in Maine to 26.2 in Rhode Island; in the Middle Atlantic division from 9.2 in Pennsylvania to 28.1 in New Jersey; in the East North Central from 14.1 in Wisconsin to 22.6 in Illinois; in the West North Central from 26.4 in Minnesota to 53.1 in South Dakota; in the South Atlantic from 4.9 in North Carolina to 34.6 in Florida (disregarding the percentage for the District of Columbia, 54.2); in the East South Central from 9.6 in Kentucky to 13.3 in Tennessee; in the West South Central from 11.9 in Louisiana to 68 in Oklahoma; in the Mountain from 20 in Utah to 72.6 in Wyoming; and in the Pacific from 48.8 in California to 69.8 in Washington. This variation in the percentage of domestic immigrants is occasioned by a variety of conditions among which may be noted the varying extent to which land has been in recent years available for settlement in the several states. The opening up of land for settlement in Oklahoma undoubtedly accounts largely for the high percentage (68) of Oklahoma's resident native population born in other states, and in general the great extent of relatively sparsely settled territory west of the Mississippi largely accounts for the high percentage of domestic immigrants in the population of the Western states. Another cause of variation is found in the location of large and rapidly growing cities within or near the boundaries of certain states. New Jersey's relatively high percentage of persons born in other states, for example, is largely accounted for by the suburban overflow of New York City.

Table 20 also shows the gain or loss to the several states by interstate migration; or, in other words, the difference between the number of persons living in the state and born in other states and the number born in the state and living in other states. For example, at the census of 1910, 213,088 persons born in the state of Maine were living in other states and 50,009 persons born in other states were living in Maine. The difference, 163,079, appears in this table as the direct net

Referring to column 7 of Table 20 it will be found that there are only 7 states (Maine, Pennsylvania, Virginia, North Carolina, South Carolina, Georgia, and Kentucky) in which the domestic immigrants—apply-

loss to the state of Maine by interstate migration. Most of the states east of the Mississippi have lost more than they have gained by this interchange of population with other states, gains being shown only for Massachusetts, Rhode Island, Connecticut, New Jersey, Michigan, West Virginia, Florida, and the District of Columbia. West of the Mississippi, on the other hand, most of the states have gained more than they have lost, the only states which have lost being Iowa, Missouri, Louisiana, and Utah. The states which have gained and those which have lost are indicated on the following map, and net gains and losses are represented in the diagram in the next column.

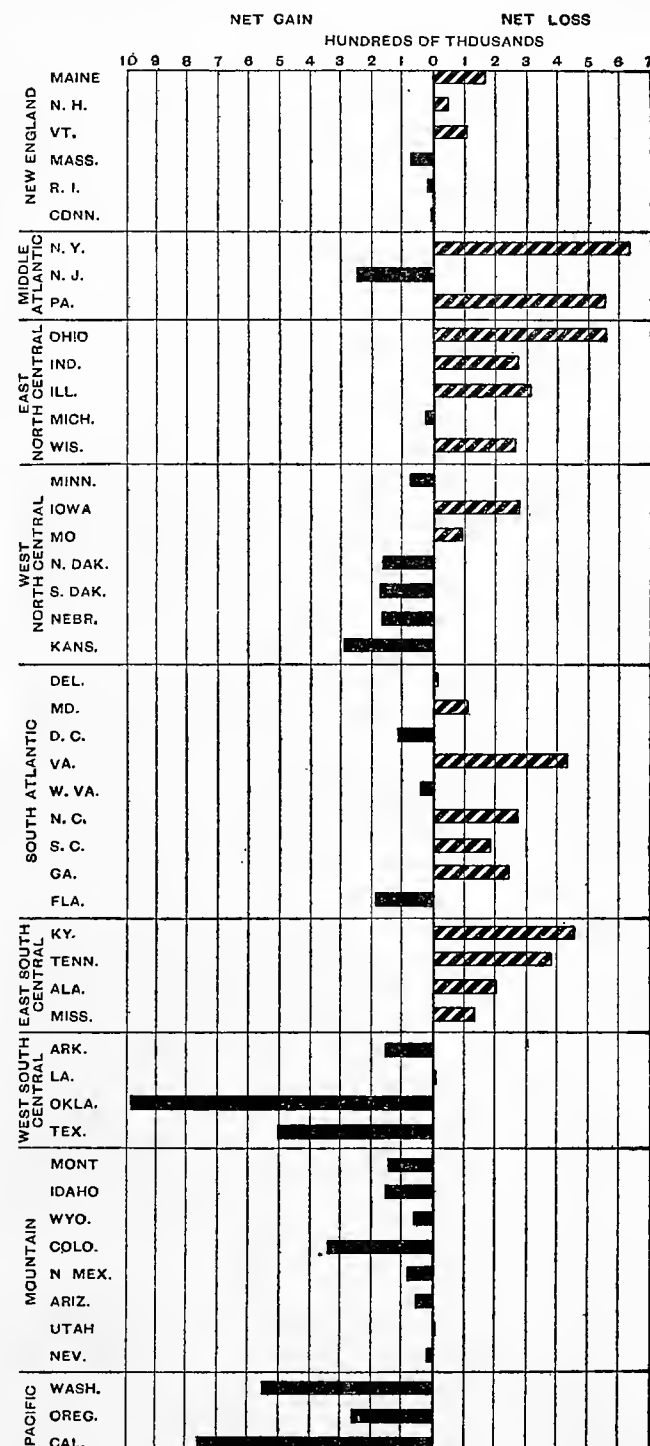

STATES HAVING GAINED OR LOST BY INTERSTATE MIGRATION: 1910.

The net gain or loss recorded for any state is, of course, no indication of the extent to which that state figures in the total volume of interstate migration. Connecticut's net gain in 1910 was only 8,083; but there were living in other states 166,597 natives of Connecticut, and there were living in Connecticut 174,680 natives of other states. The number of Missourians living in other states in 1910 was 918,958, and the number of natives living in Missouri who were born in other states was 822,738; Missouri's net loss resulting from this large migratory interchange involving 1,741,696 native migrants was only 96,220. By way of contrast may be noted Ohio's net loss of 558,666 on an interchange involving approximately the same number of migrants (1,773,370). Again, while Michigan, on an interchange involving 843,886 natives, had in 1910 made a net gain of only 28,766, Oklahoma, on an interchange involving 1,204,084 natives, had made a net gain of 981,604, and California, on an interchange involving 963,847 natives, had made a net gain of 762,625. When account is taken of the volume both of emigration and of immigration, Missouri, with its relatively small net loss of 96,220 obviously figures much more largely in the total volume of interstate migration than does Oklahoma, with its net gain of 981,604. The volume of Illinois' interstate migration involving 1,308,085 native emigrants and 997,189 native immigrants, or a total of 2,305,274 native migrants, exceeded that of any other state in

1910. New York's total volume, involving 2,004,014 migrants, was the second largest, and Ohio's and Missouri's (noted herein) the third and the fourth.

NET GAIN OR NET LOSS THROUGH INTERSTATE MIGRATION: 1910.

In 1910 there were 1,317,398 natives of New York who were living in other states; the corresponding figure for Illinois, which had the second largest number of natives living in other states, was 1,308,085; for Ohio, 1,166,018; and for Pennsylvania, 1,125,454. These states were all large losers through interstate migration. For New York, with 686,616 natives of other states living within its boundaries, the net

loss amounted to 630,782; the net loss of Illinois was 310,896; of Ohio, 558,666; of Pennsylvania, 556,250. With a much smaller resident and migrant population than any of these states, Virginia had a net loss of 432,807, its net emigration exceeding that of Illinois.

As noted with reference to the net gain or loss of the divisions, the net gain or loss of a state directly through interstate migration should not be taken as being even approximately the number by which the population of the given state is greater or less than it would have been had no interstate migration taken place.

For each of the states, except Maine and Vermont, the number of persons born in the state and living in other states increased during the last decade; there was an increase in the corresponding figure during the decade 1890-1900 in all of the states except New Hampshire, Vermont, and Virginia, and from 1880-1890 in all states except New Hampshire, Vermont, Connecticut, Virginia, North Carolina, and South Carolina. For each of the states except Iowa, Missouri, and Nebraska the number of resident natives born in other states was greater in 1910 than it was in 1900; the figure for 1900 exceeded the corresponding figure for 1890 in each state except Michigan, South Dakota, Nebraska, Kansas, West Virginia, and Nevada; in the decade 1880-1890, however, 16 states showed a decrease in the number of native immigrants.

Exclusive of the District of Columbia, in the decade 1900-1910, of the persons born in the state the percentage living in other states increased in 34 states; in the decade 1890-1900 the corresponding percentage increased in 28 states; and in the decade 1880-1890 in 17 states (not including the two Dakotas, Indian Territory, or Oklahoma, for which comparable data are not available for 1880). Of the resident population the percentage born in other states increased from 1900-1910, in 26 states; from 1890-1900, in 20 states; and from 1880-1890, in 12 states.

In the first of the two maps presented on page 703, the state areas are shaded with reference to the percentage of emigrants. This map brings out the fact that in general the emigration to other states from states located on the boundary of the United States is relatively less than from states more centrally located. This probably is in part a natural result of the fact that the possibility of emigration from a border state to other parts of the United States is cut off in one or more directions. From some of the states along the northern border there has been a very considerable emigration to Canada in recent years, but this of course is not revealed by a population census of the United States. In the second map on page 703, the state areas are shaded with reference to the percentage which the population living in the state and born in other states forms of the total population of the state who were born in the United States.

Aggregate migration of native white and negro population from and to each state.—In Table 21 the

number of native emigrants and immigrants, and the gain or loss through interstate migration, is shown by states for the white and the negro population born in and living in the United States (with state of birth reported). The table covers the three census years 1910, 1900, and 1890, but for the census of 1890 the Indian, Chinese, and Japanese are included with the negro under "colored," separate statistics for negroes not being available for that census.

In the country as a whole the percentage living in a state other than the state of birth in 1910 was 22.4 for the native whites and 16.6 for the native negroes; in 1900 the corresponding percentages were 21.5 and 15.6, respectively. In 1890 the percentages were 22 for the whites and 14.8 for the colored. The percentage both for the whites and for the negroes thus increased slightly in the decade 1900-1910. For the whites the percentage decreased slightly in the decade 1890-1900. The absolute number both of the whites and of the negroes living in states other than the state of birth increased in the last decade, as did also the number of whites from 1890-1900.

The negro element in the population native of and in the native population resident in the several Northern and far Western states is relatively so small that the percentage of migrants for the native whites of those states does not, except in a very few states, differ materially from the percentage of migrants in the total native population, although in a number of those states the percentage for the whites differs materially from that for the negroes.

In 1910 the percentage born in other states for the native whites resident in the state exceeded 50 in only 2 of the 21 Northern states, while the corresponding percentage for the native negroes exceeded 50 in 17 of those states. In 9 of the 11 states of the Mountain and Pacific divisions the percentage born in other states for the native negroes resident in each state exceeded 80, the highest percentage for the native whites in these states being that for Wyoming, 73.1. In all of the Northern and far Western states, except the 5 contiguous Northern Central states bordering the southern divisions, the percentage of the population native of each state living in other states was in 1910 somewhat higher for the native negroes than for the native whites.

Aggregate migration of native whites, classified according to parentage, from and to each state.—The percentage of interstate migrants among native whites of native parentage is, as shown in Table 22, somewhat higher in the country as a whole than the corresponding percentage for native whites of foreign or mixed parentage—23.5 as compared with 19.6 in 1910 and 22.7 as compared with 18.3 in 1900. In other words, there has been relatively less migration among the persons whose parents (or one of them) were born abroad than among persons of native parentage. This is doubtless due in part to the fact that there are relatively more young children among the former than among the latter.

STATE OF BIRTH OF NATIVE POPULATION.

Table 22 also shows that for each state of the four northern divisions, excepting Vermont and Indiana, and for all but five states of the Mountain and Pacific divisions, the percentage of persons born in the state living in other states, for the native whites of native parentage in 1910 exceeded that for the native whites of foreign or mixed parentage. In 1900 there were only two states in the northern and far western divisions in which the percentage living in other states was higher for native whites of foreign or mixed parentage born in the state than for native whites of native parentage. For each of the states of the three southern divisions, however, excepting Texas, both in 1910 and in 1900 the percentage living in other states was higher, and in the case of many Southern states very much higher, among native whites of foreign or mixed parentage born in the state than among those of native parentage; but the white population of foreign or mixed parentage in these Southern states constituted a very small proportion of the white population.

STATE OF BIRTH IN RELATION TO STATE OF RESIDENCE.

Migration to the several states from other states and from foreign countries.—Table 23 gives a classification of the population of each state in 1910, distinguishing the natives of the state, the domestic immigrants (born in other states), and the foreign immigrants (foreign born).

In nearly every state east of the Mississippi a majority at least of the population in 1910 were natives of the state, the only exceptions being, in fact, Rhode Island and the District of Columbia. In three of the southern states east of the Mississippi more than nine-tenths of the population were natives, but there were only two northern states east of the river, Maine and Indiana, in which the proportion of natives exceeded three-fourths. The foreign immigrants outnumbered the domestic immigrants in every Northern state east of the Mississippi except Vermont, Ohio, and Indiana. In Vermont and Ohio domestic immigrants were not much more numerous than the foreign, but in Indiana they outnumbered the foreign immigrants more than three to one.

West of the Mississippi there were in 1910 only eight states (Minnesota, Iowa, Missouri, Arkansas, Louisiana, Texas, New Mexico, and Utah) in which a majority of the population were natives of the state. In Wyoming the natives of the state formed only 21.8 per cent of the total population and in Washington only 23 per cent. In these two states a majority of the population were domestic immigrants, and this was also the case in Oklahoma, Idaho, and Colorado.

The domestic immigrants outnumbered the foreign immigrants in every state west of the Mississippi except Minnesota and Utah.

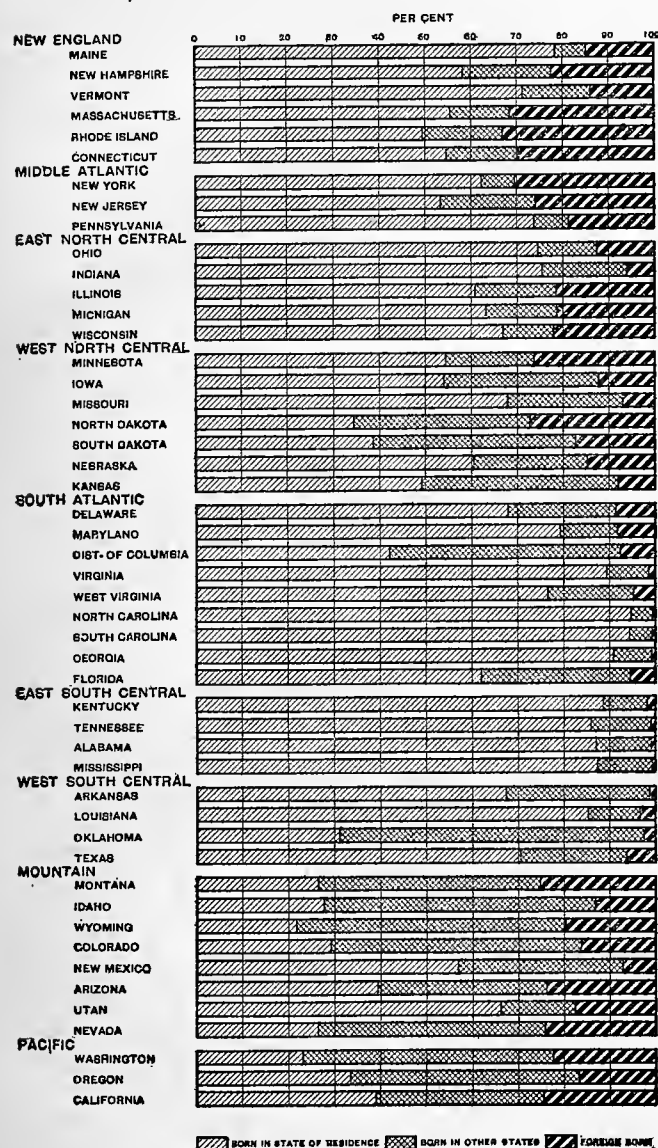

The composition of the population of the several states as regards the proportions born in the state, born in other states, and born in foreign countries, is thus seen to vary greatly from state to state. In North Carolina, for example, with only 4.9 per cent of its population born in other states, and 0.3 per cent born in foreign countries, native North Carolinians constituted, in 1910, 94.7 per cent of the population; while in the state of Wyoming, 57.7 per cent of the resident population were born in other states, 19.9 per cent in foreign countries, and, as noted above, only 21.8 per cent within the state.

¹ Includes persons born in the United States, state of birth not reported; persons born in outlying possessions, or at sea under United States flag; and American citizens born abroad. The combined number of these classes in the United States was only 360,961, or 0.4 per cent of the total population.

The following diagram shows the percentage distribution of the population of each state in 1910, classified as born in the state of residence, born in other states, and foreign born.

DISTRIBUTION OF TOTAL POPULATION OF EACH STATE, AS BORN IN STATE, BORN IN OTHER STATES, OR FOREIGN BORN: 1910.

Tables 24, 25, and 26 show for the total population, and for the white population of each state at each of the three censuses, 1910, 1900, and 1890, the number and percentage born in the state of residence ("native"), in other states ("domestic immigrants"), and in foreign countries ("foreign immigrants"). These tables give, therefore, for each of the years specified data similar to that given in Table 23 for 1910.

In the total population of the country the proportion born in the state of residence was, at each census, approximately two-thirds, the percentage being 66.5 in 1910, 68.3 in 1900, and 66.9 in 1890. The percentage of domestic immigrants was 18.4 in 1910, 17.8 in 1900, and 17.7 in 1890. At each census the percentage born in the state of residence was lower and the percentage of domestic immigrants higher for the white than for the total population.

Exclusive of the District of Columbia, in 18 of the 26 states east of the Mississippi River the percentage born in the state of residence was lower in 1910 than it was in 1900; in 13 of the eastern states the percentage of domestic immigrants had increased and in 19 the percentage of foreign immigrants had increased. Generally, however, in these states the 1910 percentages were not decidedly different from those of 1900, New York being the only state showing as great a difference as 4 per cent. West of the Mississippi specific changes have been more considerable. New Mexico's percentage born in the state of residence, for example, decreased from 73.3 in 1900 to 56.4 in 1910 and Nevada's from 42.4 to 26.4; while the corresponding percentage for Nebraska increased from 43.2 to 50 and that for Kansas from 42.9 to 48.7. In 13 of the 22 states west of the Mississippi this percentage had increased. In 11 states west of the Mississippi the percentage of domestic immigrants had increased (the increase for New Mexico being from 19.4 in 1900 to 36 in 1910, and that for Nevada, from 33.2 to 48.5); but in the other 11 Western states this percentage had decreased. In 12 of these states the percentage foreign born had decreased since 1900, in 7 increased, and in 3 had not changed.

TOTAL POPULATION OF EACH STATE, DISTINGUISHED AS BORN IN THE STATE OF RESIDENCE, IN OTHER STATES, AND IN FOREIGN COUNTRIES: 1910, 1900, AND 1890.

Division of residence of persons born in each state.—Table 27 gives the percentage distribution by division of residence in 1910 of the population born in each state and living in the United States. The absolute numbers appear in Table 35, pages 730 to 734. The distribution here is similar to that given in Table 14 for the population born in each division. It shows, for example, that of the population born in Maine and living within the United States, the percentage living in New England, including the state of Maine itself, was 88.5; the percentage living in the Pacific division was 3.5 (a percentage which exceeded that for any other division except New England); in the Middle Atlantic division, 2.2; in the West North Central, 2.1; in the East North Central, 1.7; in the Mountain, 1; and in each of the three southern divisions, less than 1.

The percentages shown for the states in each division have generally a rough similarity to those already presented and discussed (Table 14) showing the distribution of the persons born in each division taken as a whole. There are, however, considerable variations from state to state within a given division. For example, as might be expected from the northern border states of the three southern divisions there has been a considerable emigration northward, but from the southern states of the South Atlantic and East South Central divisions the migration has been mainly westward. Conversely, the more southerly states of the northern divisions have sent relatively more immigrants to the South than the more northerly states. Of course, much the larger proportion of the persons born in any state are residents of the division in which that state is located.

Division of birth of persons resident in each state.—The percentage distribution according to division of birth, of the native population residing in each state in 1910, is given in Table 28, which gives for each state a percentage distribution similar to that given for each division in Table 15. The absolute numbers appear in Table 35, pages 730 to 734. The table shows that of Maine's resident native population, 97.3 per cent were born in New England, including the state of Maine; 1.1 per cent in the Middle Atlantic division; less than 1 per cent in each of the other divisions; 0.3 per cent in the outlying possessions; and 0.2 per cent in a state not specified. No state east of the Mississippi River had in 1910 less than 80 per cent of its population born within the division in which it was located; of South Carolina's native resident population, 99.1 per cent were born in the South Atlantic division in which South Carolina is located. On the other hand, only three states west of the Mississippi had so large a proportion as 80 per cent of their native resident population born within the division in which the given state was located. Of Wyoming's native resident population only 37.3 per cent were born in the Mountain division, 28.7 per cent, or more than one-fourth, being natives of the West North Central, and 16.2 per cent natives of the East North Central division. Montana,

Idaho, Colorado, and Nevada, also, and each of the three Pacific Coast states had drawn heavily upon the East and West North Central divisions for their population.

Distribution of total native population, by state of birth and state of residence.—In Table 35 the total native population of each state and geographic division is distributed according to the state or geographic division in which born. As regards any given state, this table shows how many of the persons living in that state were born there and how many were born in each of the other states; it gives similar information for the several geographic divisions. The table covers the total native population, including those born in outlying territories or possessions of the United States, or at sea under the United States flag, those born in the United States for whom the state of birth was not reported, and American citizens born abroad. At the same time the table when read by columns gives the distribution by residence (state or geographic division) of the total population reported as born in each state or geographic division. Reading the table by lines, it is shown, for example, that of New England's total native population in 1910 of 4,727,571, the number born in the United States was 4,713,412, for 4,702,088 of whom state of birth was reported, and for 11,324 of whom state of birth was not reported. The number born in outlying possessions, including those born at sea under the United States flag and American citizens born abroad, was 14,159. Of those born in the United States for whom state of birth was reported, 4,338,452 were born in New England; 252,017 in the Middle Atlantic division; 40,741 in the South Atlantic; 38,219 in the East North Central; and 32,659 in other divisions. Of the same total, the number born in Massachusetts was 1,999,329, in Maine 700,758, in Connecticut 663,797, in other New England states 974,568; the number born in New York state, 195,278, exceeded the number born in any other state outside of New England. In the native population of New England there were 13,786 American citizens born abroad, 226 born at sea under the United States flag, 53 born in Hawaii, 42 in Porto Rico, 40 in the Philippine Islands, and 12 in Alaska.

Again, reading the table by columns, there were, in 1910, 4,907,215 persons with state of birth reported, who were natives of New England and resident in the United States (exclusive of its outlying possessions). Of these persons, 4,338,452 were living in New England, 219,782 in the Middle Atlantic division, 100,257 in the Pacific, 97,614 in the East North Central, 73,396 in the West North Central, and 77,714 in the other divisions. Of these 4,907,215 natives of New England, 2,133,335 were, in 1910, living in the state of Massachusetts, 665,920 in the state of Connecticut, 614,579 in the state of Maine, and 924,618 in other New England states. The number of native New Englanders living in New York state (154,921) exceeded the number living in any other state outside of New England.

PER CENT DISTRIBUTION, BY DIVISION OF RESIDENCE, OF THE POPULATION BORN IN EACH STATE: 1910.

¹ Includes also persons born at sea under United States flag and American citizens born abroad.² Less than one-tenth of 1 per cent.

In 1910 the population of each state embraced a larger or smaller number of immigrants from each of the other states; or, conversely, each state had sent forth as emigrants into each of the other states a larger or smaller number of its own natives. With reference to any two selected states, therefore, a migratory interchange of natives had taken place, resulting in a net gain to one and a net loss to the other state. The number of migrants involved in the interchange in the case of any two states, and the relative strength of the counter currents have obviously been determined by a variety of conditions. Other things being equal, the interchange tends, for example, to be greater between contiguous than it is between noncontiguous states. Marked differences in the density of population, the growth of urban communities, the opening up of extensive areas of land for settlement, and other special conditions may, however, induce migratory currents of considerable volume between two states geographically remote from one another. Which of the various causes have been predominant in influencing the migration of natives into or out of any given state will in most cases be obvious from a careful analysis of the data for that state, noting into which states its own natives have most largely gone and from which states its native immigrants have most largely come. When, for example, it is noted that of the 2,218,420 persons returned in 1910 as natives of the state of Iowa living in the United States, 94,623 were living in Nebraska, 75,815 in South Dakota, 67,100 in Minnesota, 64,333 in Kansas, 57,948 in Illinois, 56,893 in Missouri, 54,960 in California, 47,862 in Washington, 44,276 in Colorado, 41,186 in Oklahoma, 30,553 in North Dakota, 28,242 in Oregon, and only 138,045 in all other states, it will be obvious that the emigration from Iowa has been largely into agricultural states, most of which are less completely exploited than Iowa itself. At the same time it may be noted that of the states mentioned, Nebraska, South Dakota, Minnesota, Illinois, and Missouri are states contiguous to Iowa, and that they almost completely surround that state. Although the population of Iowa in 1910 embraced 524,774 natives of other states, the net loss of Iowa through interstate migration amounted in 1910 to 277,062, and when it is noted that in 1900 Iowa's net gain through interstate migration amounted to 46,013, these facts go far to explain the decrease of 7,082 in Iowa's population during the decade 1900-1910. The extent to which the social and economic development of New York City figures as a cause of immigration from other states into New York state is apparent from the fact that of the 686,616 natives

of other states living in New York state, 364,312, or more than one-half, were living in New York City (Table 34). Of the total number of natives of other states living in New York state, 82.3 per cent were, in 1910, living in urban communities (Table 33).

Distribution of native white and negro population, by state of birth and state of residence.—In Tables 36, 37, 38, and 39 a distribution similar to that made for the total native population in Table 35 is made for the native whites (Table 36), the native negroes (Table 37), the native white population of native parentage (Table 38), and the native whites of foreign or mixed parentage (Table 39). These tables, therefore, present in full detail for 1910 the data relating to state of birth, upon which the summaries and percentages already considered, so far as these relate to 1910, are based.

Tables 40 to 43 are designed to bring out more briefly the leading facts as to interstate migration shown in the detailed tables regarding state of birth.

In Table 40 the population living in each state in 1910 and in 1900 is classified as native and foreign born, and the native population as born in the state, in all other states combined, and in certain specified states which have contributed most largely to the population of the state. In the case of each state, two percentage distributions for each year are given; a distribution (1) of the total population, as native, foreign born, born in the state, in other states, and in specified states, and (2) of the native population as born in the state, in other states, and in specified states. The 1910 figures showing the number in the native resident population of each state, born in other specified states, are identical with those given in Table 35. In Table 41 a presentation similar to that of Table 40 is made for whites and negroes separately in 1910, for the Southern states only, showing for each state the number and percentage native and foreign born, born in the state, in other states, and in specified states.

The population born in each state is classified in Table 42 as living in the state, in other states, and in each of the states to which the largest numbers have migrated from the state; the figures relate both to 1910 and to 1900. Two percentage distributions are given: (1) Of the population born in each state, the percentage living in the state, in other states, and in the specified state is shown, and (2) of the total born in the state and living in other states, the percentage living in the specified state is given. In Table 43, a similar presentation is made for the whites and the negroes separately, covering 1910 only and relating only to the Southern states.

MIGRATION TO URBAN AND RURAL COMMUNITIES.

Interdivisional migration.—The urban and the rural population is classified in Table 29, for 1910, as born in the division of residence, in other divisions, and in foreign countries. The small number of natives for whom the state of birth was not reported are included in the totals, but not in the other columns. The percentages given, being based on the totals, do not therefore quite add to 100. Of the total urban population of the United States in 1910, 63.7 per cent were born in the division of residence, and of the total rural, 80.2 per cent; of the urban, 12.9 per cent were born in other divisions, and of the rural, 11.9 per cent; of the urban, 22.9 per cent were foreign born, and of the rural, 7.6 per cent. It thus appears that the percentage born in other divisions was somewhat higher for the aggregate urban than it was for the aggregate rural population of the country, while the percentage foreign born was much higher, and the percentage born in the division of residence much lower, in the urban than it was in the rural.

In each division, also, as in the country as a whole, the percentage born in the division of residence was much lower for the urban than for the rural population. The percentage born in other divisions, was in each division higher in the urban than in the

rural population—the differences being relatively more conspicuous than in the country as a whole. For example, of the urban population of the West North Central division in 1910, 24 per cent were born in other divisions, but of its rural population only 18.3 per cent.

In Table 30 the distribution of the white population of urban and rural communities is shown in the same way as that of the total population in Table 29. Of the urban white population 63 per cent were born in the division of residence, of the rural white, 77.9 per cent; the percentage born in other divisions was 12.4 for the urban and 13 for the rural; the percentage foreign born 24.2 and 8.9, respectively. In the urban population of the three southern divisions, in which the negro population constitutes a large proportion of the total population, the percentage born in the division of residence was somewhat lower for the white than for the total population, the percentage born in other divisions and the percentage foreign born was somewhat higher for white than for the total population; in the rural population the differences, which are generally slight, are in the same direction as in the urban. These conditions are the result of the fact that the negroes are somewhat less migratory than the native whites and of the fact that few negroes were born abroad.

Interstate migration.—Table 31 classifies the urban and the rural population of each state as born in the state of residence, in other states, and in foreign countries. In Table 32 a similar tabulation of data is made for the white population.

Of the total urban population in the country as a whole, 57.3 per cent were born in the state of residence, and of the rural, 74.5 per cent; of the urban, 19.3 per cent were born in states other than the state of residence, and of the rural, 17.6 per cent; of the urban, 22.9 per cent were foreign born, and of the rural, 7.6 per cent. These figures illustrate the fact that the urban population is of more composite origin than the rural. By states the percentage born in the state of residence for the urban communities ranged from 18 in Idaho to 88.1 in South Carolina; the percentage born in other states ranged from 7.9 in Maine and in New York, to 74.9 in Oklahoma; the percentage foreign born, from 1 in North Carolina to 34.8 in New York. In the rural population the percentage born in the state of residence ranged from 22.1 in Wyoming to 96 in North Carolina; the percentage born in other states, from 3.8 in North Carolina to 63.8 in Oklahoma; the percentage foreign born, from 0.2 in North Carolina, South Carolina, and Georgia, to 27.5 in North Dakota.

Distribution of native and foreign-born population between urban and rural communities.—In Table 33 is given by states for 1910 the percentage distribution of the population (1) born in the state of residence, (2) born in other states, and (3) foreign born, respectively, as living in urban communities, in rural communities, in cities of 25,000 inhabitants or more, and in cities of 2,500 to 25,000. The 1900 percentages included in the table relate to a classification of the population for each of the three nativity groups as living in cities of 25,000 inhabitants or more and in smaller cities and rural communities.

In the country as a whole the percentage living in cities of 25,000 and over in 1910 was 25.6 for persons born in the state of residence; 30.7 for persons born in a state other than their state of residence; and 56 for the foreign born. The corresponding percentages for 1900 were 21.4, 25.3, and 49.7,

respectively. These figures would seem to indicate that migrants from one state to another frequently move from country to city, although the higher percentage in cities for migrants might be occasioned by other conditions. It is quite possible that persons born in cities more frequently migrate to cities in other states than persons born in rural districts migrate to rural districts in other states. But even if the same proportion of rural as of urban emigrants went to cities, a relatively larger emigration from the states in which the percentage urban was large, as compared with the emigration from states in which the percentage urban was small, would tend to raise the percentage in cities for migrants above that for resident natives. Similarly, without any migration from country to city, a greater tendency on the part of the urban as compared with the rural population to migrate might give a higher percentage in cities for migrants than for resident natives. Except in 2 of the states containing cities of 25,000 and over, the percentage living in such cities was higher for persons born in other states than for persons born in the state of residence. In 42 of the 48 states the percentage living in cities of 2,500 to 25,000 was also higher for persons born in other states than for persons born in the state of residence. In 31 states the percentage living in these smaller cities was higher for persons born in other states than for the foreign born. In 35 states the percentage rural was highest for the persons born in the state of residence and lowest for the foreign born.

The percentage urban and the percentage living in the larger and in the smaller cities for each of the nativity groups shown in Table 33 vary greatly from state to state, being in each case relatively high in those states in which the urban population constitutes a relatively large proportion of the total population. In New York state, for example, 78.8 per cent of whose population were in 1910 living in urban communities, the percentage living in cities of 25,000 and over was 61.6 for natives born in the state, 71.5 for natives of other states living in New York, and 85.3 for the foreign born; the corresponding percentages for Arkansas, whose percentage urban was 12.9, were 2.3, 3.7, and 11.7, respectively.

STATE OF BIRTH OF NATIVE POPULATION.

723

URBAN AND RURAL POPULATION OF EACH STATE, DISTINGUISHED AS BORN IN THE STATE OF RESIDENCE, IN OTHER STATES, AND IN FOREIGN COUNTRIES: 1910.

Table 31	URBAN POPULATION: 1910							RURAL POPULATION: 1910

MIGRATION TO PRINCIPAL CITIES.

In Table 34 the number and the percentage born in the state of residence, born in other states, and born in foreign countries is given for each city of 50,000 inhabitants or more, together with the percentage of the native population born in the state of residence and born in other states. In the case of cities having a negro population of over 5,000 the percentages and numbers are given for the whites and the negroes separately.

Of New York City's total population, 51.2 per cent were born in the state of residence, 7.6 per cent were born in other states, and 40.8 per cent were foreign born. The corresponding percentages for Chicago were 46.6, 17, and 35.8; for Philadelphia, 63.4, 11.6, and 24.8. Of New York City's native population, 86.5 per cent were born in the state of New York and 12.9 per cent in other states. The corresponding percentages for Chicago were 72.6 and 26.5; for Philadelphia, 84.3 and 15.5. The percentage born in states other than the state of residence is generally higher in western than it is in eastern cities. Of Oklahoma

City's native population, for example, 84.7 per cent were born in states other than that in which the city is located. In 20 of the 21 cities located in the Northern and far Western states, for which figures are given separately for the whites and for the negroes, the percentage born in a state other than the state of residence was higher for the negroes than for the whites, and in 13 of the 20 cities located in the Southern states the corresponding percentage was lower for the negroes than for the whites.

Table 44 shows, for each city of 50,000 inhabitants or more, the number of persons resident in the city in 1910 who were born in each geographic division of the country and in each state. As the census statistics do not show the specific place of birth within any given state, there is no way of indicating what part of the population of any given city was born within the city itself. The population of each of these cities embraced immigrants from nearly every state. The population of New York City, of Chicago, and of Philadelphia, for example, each embraced immigrants from every state and outlying possession except Guam.

STATE OF BIRTH OF NATIVE POPULATION.

727

POPULATION OF CITIES HAVING 50,000 INHABITANTS OR MORE, DISTINGUISHED AS BORN IN THE STATE IN WHICH CITY IS LOCATED, IN OTHER STATES, AND IN FOREIGN COUNTRIES: 1910.

[White and negro shown separately for cities having over 5,000 negroes.]
